

DEX Corporate Bond Barbell Index ETF

AS AT 3/31/2013

Fund Overview

First Asset DEX Corporate Bond Barbell Index ETF has been designed to replicate, to the extent possible, the performance of the DEX Corporate Bond Barbell Index, net of expenses. The DEX Corporate Bond Barbell Index is comprised of a diversified selection of investment grade corporate bonds issued in Canada and denominated in Canadian dollars.

The Index is divided into two buckets, each representing approximately 50% of the total market value, with the short maturity bucket comprised of floating rate notes and fixed coupon bonds with at least 1 year to maturity but less than 2 years to maturity, and the long maturity bucket comprised of fixed rate bonds with at least 10 years to maturity but less than 20 years to maturity.

How To Purchase First Asset Exchange Traded Funds

First Asset exchange traded funds are listed on the Toronto Stock Exchange in the same manner as shares of a publicly-traded company. First Asset exchange traded funds can be purchased through most brokerage accounts. They can be bought and sold throughout the day on the TSX during normal trading hours.

Risks and Other Considerations

Commissions, management fees and expenses all may be associated with investments in exchange traded funds. Please read the prospectus before investing. Exchange-traded funds are not guaranteed, their values change frequently and past performance may not be repeated. The indicated rates of return are the historical annual compounded total returns, including changes in unit value and do not take into account sales, redemption or optional charges or income taxes payable by a security holder that would have reduced returns. "DEX Corporate Bond Barbell Index™" is a trademark of PC-Bond, a business unit of TSX Inc., and has been sublicensed for use for certain purposes to First Asset by PC-Bond. This fund is not sponsored, endorsed, sold or promoted by PC-Bond, its affiliates or third party data suppliers and they make no representation, warranty, or condition regarding the advisability of investing in this fund. This communication is intended for informational purposes only and is not, and should not be construed as, investment and/or tax advice to any individual. Particular investments and/or trading strategies should be evaluated relative to each individual's circumstances. Individuals should seek the advice of professionals, as appropriate, regarding any particular investment.

A Barbell Strategy Provides Investors Steady Income and Flexibility

A barbell bond investment strategy allocates the total portfolio equally between short term and long term bonds. The barbell strategy allows the fixed-income investor to receive higher income from long term bonds while the short term bond exposure provides a counter-balance of safety and flexibility.

First Asset DEX Corporate Bond Barbell Index ETF replicating the DEX Corporate Bond Barbell Index has 50% invested in short term maturities (less than two years) and floating rate notes, with the other 50% invested in longer term maturities (10-20 years). This approach provides a high current yield but lower overall duration risk than other broad market indexes. All bonds in the ETF are rated investment grade.

The barbell approach minimizes the need to determine where interest rates are headed. Instead the fixed income investor can rest easier with the higher current income provided by the 50% in longer term bonds, balanced off by the lower risk and flexibility provided by having 50% of the Index invested in floating rate notes and sub-two year maturities.

First Asset DEX Corporate Bond Barbell Index ETF provides diversification by offering a corporate bond ETF across multiple sectors. It's a smart risk-adjusted way to invest in investment grade bonds.
